Research activity

Scientific CV *

Salvatore Coscarelli is a Phd Candidate (XXXVI Cycle). He is developing a research project on the legal importance that the provision of health prevention (which in large part should be provided by the medicine of the territory) has in achieving the right to human health and the widespread interest of the community. Prevention is very conditioned by predictiveness of diagnostics facilitated by artificial intelligence that assists the lender, indeed, increasingly it replaces the human lender (as is the case in radiology).

The study of organizational models designed for the exercise of prevention medicine is essential for the effectiveness of this and requires specific attention to the synthesis between specialists and integration of skills.

Funded research projects *

Insert a list of funded research projects from last 10 years relative to the research topic, with funding agency, call details, role on the project and budget

Keywords *

insert max 10 keywords separated comma (,)

Energy – health – preventive – technology – preventive – digitalization.
