- 2018 - present Civil and Commercial Mediator
- 2023 - present Internship at EnSiel - Consorzio Interuniversitario per l'Energia e i Sistemi Elettrici - School of Engineering University of L'Aquila

Research activity

Scientific CV *

Gianna Giardini is a Ph.D. candidate (XXXVIII Cycle). Her research, based on empirical, qualitative, hermeneutic and comparative approach, aims basically to: i) discover the role that public authorities can play to be a driving force behind development of energy communities; ii) understand in a comparative perspective the different legal ways municipalities can work to take part and support energy communities projects; iii) apply to research *legal design*: a new methodology which has the purpose to increase consumer *empowerment* - and legal awareness in general - through figurative arts; iv) strengthen the role of Institutions in the communication of normatively virtuous manners, oriented towards the sustainable development and the fight against climate change. The research presents an high level of inter-multi-disciplinarity, ranging in sectors from law to moral philosophy, from sociology to media, from figurative arts to *design*, as well as touching on disciplinary areas with a strong scientific-technological vocation, aspiring, in this context, to empower anthropocentric evolution. With reference to *NRRP Plan*, research contributes to: i) innovating P.A.; ii) strengthening knowledge, skills and efficiency; iii) simplifying rules and procedures through digitalisation; iv)

keeping safe digital decision-making processes; v) implementing clean energy and ecological transition; vi) safeguarding the public interest with taking care of social, economic and environmental needs.

Keywords *

sustainability, climate change, energy communities, public authorities, change management, contracts, artificial intelligence, legal design, multidisciplinary approach.
